ORLEN Jedlicze Petroleum Refinery, based in Jedlicze is one of the longest-standing petroleum refineries on the territory of Poland. Since 1999 it has belonged to the capital structure of PKN ORLEN S.A., one of the major petroleum sector corporations in Middle-Eastern Europe. They combine over 100 years of tradition with modernity. As a reliable partner we manufacture and market prime quality products and pursue their continuous improvement.

Since 1963 the Company has been specializing in industrial management of used/waste oils by their regeneration towards base oils. Since 2001 the regeneration process has been carried out in a plant, then the state-of-the-art in Europe and unique in Poland, using of hydrofinishing process and meeting the highest environmental requirements of the European Union. The plant produces base oils of quality exceeding the requirements for Group I base oils, and also diesel and heating oils of sulphur content below 0.1 %.

The Company is a widely-known and reputable manufacturer of heavy fuel oils, meeting the most stringent requirements regarding the sulphur and nitrogen content. In 2006 the Company started the production of "Ekoterm Plus", a light heating oil, in cooperation with PKN ORLEN S.A. In mid-2007 the Company commenced the production of prime quality kerosene solvents, using catalytic, high-pressure hydrogen processes. The Company obtained co-funding for construction of this modern solvent-producing plant of a unique product portfolio on the scale of Poland, from the European Union's structural Funds in a form of grant of the National Fund for the Environment Protection and Water Management.
